

## Appendix FW.2

### Feeding Trough Lengths

#### Trough Space - Cattle

Feeding trough space should be appropriate to the feeding system and the weight and size of the cattle.

| Weight (kg) | Ration fed    | Ad-lib / self feed |
|-------------|---------------|--------------------|
|             | (centimetres) |                    |
| 200         | 45            | 15                 |
| 250         | 45            | 15                 |
| 300         | 50            | 15                 |
| 350         | 50            | 15                 |
| 400         | 55            | 17                 |
| 450         | 55            | 19                 |
| 500         | 55            | 22                 |
| 550         | 55            | 24                 |
| 600         | 60            | 26                 |
| 650         | 65            | 28                 |
| 700         | 70            | 30                 |
| 750         | 75            | 32                 |

#### Trough Space - Sheep

Feeding trough space should be appropriate to the feeding system and the size of the sheep.

| Weight (kg)                        | Trough length |
|------------------------------------|---------------|
|                                    | (centimetres) |
| Store / Finishing Lamb & Ewe Hoggs | 30            |
| Ewe - Small                        | 45            |
| Horned                             | 45            |
| Medium                             | 45            |
| Large                              | 50            |
